**Cyber Security Engineer: Detection Engineering, Vulnerability Management and Secure Development**

## PROFILE

Security engineer with two and a half years as a commercial software engineer and an MSc in Cyber Security Engineering from Warwick. I approach security as an engineer first: I build controls into the pipelines teams already use, write and tune detection logic, reconstruct incidents from endpoint and network telemetry, and confirm a finding before anyone acts on it. Practical work across detection engineering, penetration testing, cloud and container hardening, network security and risk assessment.

## PROFESSIONAL EXPERIENCE

### Software Engineer

GoSaaS Labs (Renasas, Fluke, Tektronix clients) | Jul 2023 to Dec 2025

- Led a security overhaul on the Archiver document archiving platform, building the controls into the existing CI/CD workflow so the team adopted them without slowing delivery.
- Built role based access control, authentication and secure search from scratch, so users only ever reached data they were cleared for.
- Investigated production incidents across platforms serving three global clients, working from application behaviour, logs and error output to root cause under deadline pressure.
- Improved application performance by around 30% by refactoring legacy MongoDB aggregation pipelines, and deployed backend services on AWS with Docker and Kubernetes.
- Mentored two junior developers through onboarding and had them contributing to production within weeks.

### Database Lab Instructor

FAST National University of Computer and Emerging Sciences | Jan 2024 to Jul 2025

- Taught database systems, including secure database practice, to over 100 students, and was their main technical contact when something broke.

## SECURITY PROJECTS

**MSc Dissertation: RaaS Attack Chain Emulation and Detection Engineering** | Wazuh, Sysmon, Python, MITRE ATT&CK

- Built a four host adversary emulation lab reproducing an 11 stage Ransomware as a Service attack chain, then ran a 21 run controlled experiment measuring what a Wazuh SIEM detects and misses across four initial access vectors, with and without endpoint protection.
- Authored 20 custom Wazuh detection rules, traced a live rule chaining defect that was silently suppressing alerts, and showed that Microsoft Defender detected 3 of 11 attack stages in milliseconds but fully prevented only 1.

**SIEM Threat Investigation** | Proactive Cyber Defence, MSc

- Rebuilt a simulated ransomware attack in Splunk from Sysmon, Windows Event Logs, SMB and HTTP data, quantified 257 files encrypted on the file server and 406 on the endpoint, and wrote five ATT&CK mapped detection rules with tuning guidance.

**Web Application and Infrastructure Penetration Test** | Ethical Hacking, MSc

- Rated 15 vulnerabilities across three hosts against CVSS (3 critical, 7 high, 5 medium) under PTES, chaining template injection into remote code execution, a container escape and root, and exploiting MS17-010 on a legacy Windows host.

**Container Security and Vulnerability Management** | Cloud Security, MSc

- Cut unique known vulnerabilities in a containerised application by roughly 85 to 90%, and caught a scanner gap where package database scanning missed 25 vulnerabilities that binary fingerprinting found.

**Network Design and Risk Assessment** | Network Security; Compliance, Risk and Governance, MSc

- Designed a segmented Cisco network for a 160 user firm with OSPF, a DMZ, ACLs, zone based firewalls and TACACS+, and separately built an IEC 62443 risk register for a ten asset OT estate with named owners and timelines.

## EDUCATION

University of Warwick | MSc Cyber Security Engineering | 2025 to Sept 2026

FAST National University of Computer and Emerging Sciences | BSc Computer Science | 2019 to Aug 2023

## TECHNICAL SKILLS

**Detection and Response:** Splunk (SPL), Wazuh, Sysmon, Microsoft Defender (XDR/EDR), Windows Event Logs, alert triage, log correlation, detection tuning, MITRE ATT&CK

**Cloud and Vulnerability Management:** AWS, Docker, Kubernetes, Trivy, Gripe, Dockle, Hadolint, container hardening, CVSS, CIS Benchmarks, NIST SP 800-190

**Offensive Security:** Nmap, Metasploit, Burp Suite, sqlmap, Gobuster, ffuf, Kali Linux, PTES, OWASP Testing Guide, OWASP Top 10

**Networking, Forensics and Risk:** TCP/IP, DNS, OSPF, VLANs, ACLs, firewalls, TACACS+, Autopsy, FTK Imager, IEC 62443, ISO 27001, NIST CSF, GDPR

**Engineering:** Python, Bash, PowerShell, JavaScript, TypeScript, SQL, Node.js, React, PostgreSQL, MongoDB, Git, CI/CD

**Certifications:** Oracle Cloud Infrastructure AI Foundations Associate; AWS Cloud Practitioner Essentials; CompTIA Security+ (scheduled 2026)
