Coventry, United Kingdom | Open to relocation

Software Engineer: Full Stack, Backend Systems and Secure Development

PROFILE

Software engineer with two and a half years shipping production features for enterprise clients including Renesas, Fluke and Tektronix. Full stack across JavaScript, TypeScript, Python, React, Node.js, PostgreSQL, MongoDB and AWS, owning features from design through deployment and production support, and working directly with clients along the way. Finishing an MSc in Cyber Security Engineering at Warwick, which has made secure development a default rather than an afterthought.

PROFESSIONAL EXPERIENCE

Software Engineer

GoSaaS Labs (Renesas, Fluke, Tektronix clients) | Jul 2023 to Dec 2025

- Improved application performance by around 30% by refactoring legacy code and MongoDB aggregation pipelines to cut query times.
- Owned production features for enterprise SaaS applications from implementation through CI/CD deployment and post release support, working directly with clients to turn business problems into technical solutions.
- Built and maintained backend services and REST APIs across Node.js, Express, React, PostgreSQL and MongoDB in a microservices architecture, deployed on AWS with Docker and Kubernetes.
- Took over an Oracle JET full text search application after the original developer left, learned the framework in days and stabilised it before a client demo, then delivered new features on it.
- Led a security overhaul on the Archiver platform, building role based access control and secure search from scratch and fitting the controls into the existing developer workflow.
- Diagnosed and fixed client reported production issues under tight deadlines, and mentored two junior developers who were contributing to production within weeks.

Database Lab Instructor

FAST National University of Computer and Emerging Sciences | Jan 2024 to Jul 2025

- Taught SQL, indexing, transactions and query optimisation to over 100 students as their primary technical contact, with 75% achieving a grade of 3.3 or above.

Associate Software Engineer

Infinkorn (promoted from intern within 2 months) | Oct 2022 to Dec 2022

- Built and maintained web applications in Ruby on Rails, PostgreSQL and Docker across an MVC architecture.

PROJECTS

Secure Clinical Research Platform | MSc, Python

- Built a twelve module Python application for cross border research collaboration with three user roles, and designed a three layer envelope encryption key hierarchy (AES-256, RSA-2048 key wrapping, RSA-PSS signatures, HMAC signed audit logs) that solved a key distribution problem blocking uploads.
- Enforced access control at two independent layers, database filtering and cryptographic enforcement, so neither depends on the other holding, verified across 13 test cases.

Car Auction Platform | BSc Final Year Project

- Led a team of three building a full stack auction platform with authentication, automated bidding logic and database design.

AI Job Intelligence Tool | Personal Project, Python

- Built an automation tool that analyses job listings, matches them against a skills profile and prioritises applications with scoring logic.

EDUCATION

University of Warwick | MSc Cyber Security Engineering | 2025 to Sept 2026

FAST National University of Computer and Emerging Sciences | BSc Computer Science | 2019 to Aug 2023

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, Bash, C++, C, Ruby, HTML and CSS

Frameworks and Testing: React, Next.js, Node.js, Express.js, Redux, Material UI, Jest, Cypress, RSpec

Data and Cloud: PostgreSQL, MongoDB, MySQL, SQLite, AWS, Docker, Kubernetes, CI/CD, Git, GitHub, Linux

Practices: REST API design, microservices, agile and Scrum, code review, testing, secure development, role based access control, applied cryptography

Tools: Cursor, GitHub Copilot, Postman, Studio 3T, VS Code, IntelliJ

Certifications: Oracle Cloud Infrastructure AI Foundations Associate; AWS Cloud Practitioner Essentials; CompTIA Security+ (scheduled 2026)
