Coventry, United Kingdom | Open to relocation

PROFILE

Software engineer with around two years shipping production features for enterprise clients including Renesas, Fluke and Tektronix. Full stack work across JavaScript, TypeScript, Python, React, Node.js, PostgreSQL, MongoDB and AWS, owning features from design through deployment and production support. Used to working directly with clients, mentoring juniors and supporting live systems. Currently finishing an MSc in Cyber Security Engineering at Warwick, which has made secure development a default rather than an afterthought.

EXPERIENCE

SOFTWARE ENGINEER

GoSaaS Labs (Renesas, Fluke, Tektronix clients) | Jul 2023 to Aug 2025

- Owned production features for enterprise SaaS applications from implementation through deployment and post release support.
- Built and maintained backend services and REST APIs across Node.js, Express, React, PostgreSQL and MongoDB in a microservices architecture.
- Refactored legacy code and MongoDB aggregation pipelines, cutting query times and improving application performance by around 30%.
- Took over an Oracle JET full text search application after the original developer left, learned the framework in days and stabilised it before a client demo, then delivered new features on it.
- Led a security overhaul on the Archiver platform, building the control into the existing developer workflow, and wrote role based access control and secure search from scratch.
- Deployed and managed services on AWS with Docker and Kubernetes across CI/CD pipelines.
- Diagnosed and fixed client reported production issues under tight deadlines, keeping stakeholders updated throughout.
- Worked directly with enterprise clients to turn business problems into technical solutions.
- Mentored two junior developers through onboarding and got them contributing to production within weeks.
- Worked in an agile team with sprint planning, standups and code review alongside QA and product.
- Use Cursor and GitHub Copilot as part of day to day development.

DATABASE LAB INSTRUCTOR

FAST, National University of Computer and Emerging Sciences | Jan 2024 to Jul 2025

- Taught database systems to over 100 students covering SQL, indexing, transactions and query optimisation, with 75% achieving a grade of 3.3 or above.
- Was the primary technical contact for students and adapted explanations to very different levels of background knowledge.

ASSOCIATE SOFTWARE ENGINEER

Infinikorn (promoted from intern within 2 months) | Oct 2022 to Dec 2022

- Built and maintained web applications using Ruby on Rails, PostgreSQL and Docker across an MVC architecture.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Bash, SQL, C++, C, Ruby, HTML and CSS

Frameworks and Libraries: React, Next.js, Node.js, Express.js, Redux, Material UI, Jest, Cypress, jQuery, RSpec, Capybara

Databases: PostgreSQL, MongoDB, MySQL, SQLite

Cloud and DevOps: AWS, Docker, Docker Compose, Kubernetes, CI/CD, Git, GitHub, AWS CodeCommit, Linux

Practices: REST API design, microservices, agile and Scrum, code review, testing, debugging, mentoring

Security: Secure development, authentication and role based access control, applied cryptography, OWASP Top 10, container hardening, vulnerability assessment

Tools: Cursor, GitHub Copilot, Postman, Studio 3T, VSCode, IntelliJ

PROJECTS

Secure Clinical Research Platform | MSc, Python

- Twelve module Python application for cross border research collaboration with three user roles, SQLite persistence and a command line interface.

- Designed a three layer envelope encryption key hierarchy to solve a key distribution problem that would otherwise have blocked uploads, and implemented AES-256, RSA-2048 key wrapping, RSA-PSS signatures, bcrypt hashing and HMAC signed audit logging.
- Enforced access control at two independent layers, database filtering and cryptographic enforcement, so neither depends on the other holding.

Container Security Hardening | *MSc*

- Hardened a two tier containerised application, cutting known vulnerabilities by roughly 85 to 90% by rebuilding on a minimal base image and replacing an end of life frontend image.
- Restructured the deployment with segmented networks, non root users, dropped Linux capabilities, resource limits and health checks, mapped to CIS Docker Benchmark guidance.

Other Projects

- AI Job Intelligence Tool: automation system that analyses job listings, matches them against a skills profile and prioritises applications using scoring logic.
- Car Auction Platform (final year project): led a team of three building a full stack auction platform with authentication, bidding logic and database design.
- Flappy Bird AI and Train Management System: neural network game agent in Python, and a C++ system built on core data structures with a GUI.

EDUCATION

University of Warwick | *MSc Cyber Security Engineering, 2025 to Expected Sept 2026*

Modules: Proactive Cyber Defence, Ethical Hacking, Cloud Security, Network Security, Digital Forensics, Applied Cryptography, Compliance, Risk and Governance

FAST, National University of Computer and Emerging Sciences | *BSc Computer Science, 2019 to Aug 2023*

CERTIFICATIONS AND TRAINING

- CompTIA Security+, scheduled for 2026
- Oracle Cloud Infrastructure 2023 AI Certified Foundations Associate
- AWS Cloud Practitioner Essentials (AWS Skill Builder)
